

Nida Subaşı

Cybersecurity Analyst — Penetration Testing, Network Security & SOC | CRTOM Certified

+90 534 296 4813 | nidaasubasi@gmail.com | Malatya, Türkiye
linkedin.com/in/nida-subaşı | github.com/NidaSu0 | nidasu0.github.io

Professional Summary

Earned the CRTOM (Red Team Leaders) certification before graduating, via an exam built on real-world attack scenarios. Cappadocia University Information Security Technology graduate (GPA 3.28); built Python security tools, three of them open source on GitHub, and applied the vulnerability scanning-exploitation-reporting cycle end to end in an isolated Kali Linux lab, running reconnaissance with Nmap and traffic analysis with Wireshark. Goal: bring this practice to a corporate environment in a junior penetration testing, SOC analyst (L1) or network security role.

Hands-On Experience & Projects

Network Reconnaissance & Vulnerability Scanning Tool — Python

2025–2026

github.com/NidaSu0/Guvenlik-Tarayici

- Developed a security tool covering Nmap's core functions (port scanning, ICMP/TCP host discovery, network reconnaissance) using only the Python standard library with zero external dependencies; enabled concurrent scanning with a 50-thread parallel architecture.
- Designed the tool with two separate interfaces, a colored CLI and a Tkinter GUI, and published it as open source on GitHub.

Isolated Kali Linux Penetration Testing Lab

2025

- Built an isolated pentest lab environment using network segmentation and secure virtualization; performed host discovery and port/service scanning with Nmap, packet capture and network traffic analysis with Wireshark, applying the vulnerability scanning - exploit development - reporting chain end to end.

Red Team Operations Simulation — as part of CRTOM

2026

- Conducted adversary simulation on real-world attack scenarios and developed defense/response plans for each attack step; this work resulted in earning the CRTOM (Certified Red Team Operations Management) certification in February 2026.

Password Security Analysis Tool — Python

2025–2026

github.com/NidaSu0/sifre-analiz

- Developed a real-time password strength analysis tool based on Shannon entropy and GPU brute-force time estimation; added comparative analysis across 4 hash algorithms (MD5, SHA-1, SHA-256 and SHA-512) and secure password generation.

OptiStock — Inventory & CRM System (Capstone Project · internship equivalent)

2025–2026

github.com/NidaSu0/Optistock · Flet, SQLite

- Single-handedly developed a 4-module desktop application for inventory tracking, customer management, sales and daily revenue reporting; the project scored a full 100/100 in the jury evaluation.

Technical Skills

Cybersecurity & Penetration Testing: Penetration Testing Methodology, Red Team Operations, Vulnerability Scanning, Exploit Development, Cyber Threat Intelligence
Defense (Blue Team): Cyber Incident Response, Network Traffic & Packet Analysis
Tools & Platforms: Kali Linux (isolated lab), Nmap, Wireshark, Tkinter, Flet, SQLite, Git & GitHub, GitHub Copilot
Network & System Security: TCP/IP, Network Protocols, Firewall, IDS/IPS, Linux Operating System, Windows
Programming Languages: Python, C#, JavaScript, PHP, SQL
Web & Databases: HTML, CSS, PHP, SQL Databases, NoSQL Applications, FastAPI (REST API)
Cryptography & Information Security: Fundamentals of Cryptology, Hash Algorithms (MD5/SHA family), Secure Software Development, Information Systems Security Management

Education

Cappadocia University — Cappadocia Vocational School, Nevşehir

August 2024 – June 2026

Associate Degree — Information Security Technology (GPA: 3.28 / 4.00)

- 4th semester GPA 3.62 — highest performance in the graduating semester; capstone project 100/100.
- Core courses: Cyber Attack & Defense, Secure Software Development, Fundamentals of Cryptology, Network Security, Information Systems Security Management I-II, Mobile Security, Python Programming, Artificial Intelligence Applications, NoSQL Applications.

Certifications & Training

Certification: CRTOM — Certified Red Team Operations Management, Red Team Leaders (February 2026)
Turkcell Academy — Geleceği Yazanlar Program (July 2026): Pentesting · Introduction to Cybersecurity · AI-Assisted Backend: API Development with Copilot & FastAPI · System Design and Real-World Case Architecture
Cybersecurity: Cybersecurity Applications with Python · Cyber Incident Response · Introduction to Cybersecurity (BTK Academy, January 2026) · Cybersecurity & Information Security Training (Udemy, June 2026) · Ethical Hacker Training (Udemy, in progress)
Networking & Programming (Cisco NetAcad / Cappadocia Univ.): IT Essentials 7 (January 2026) · Networking Essentials (July 2025) · Python Essentials 1-2 (June 2026) · JavaScript Essentials 1 (May 2026)

Languages

Turkish: Native · English: A2-B1 (actively improving) · German: Beginner
